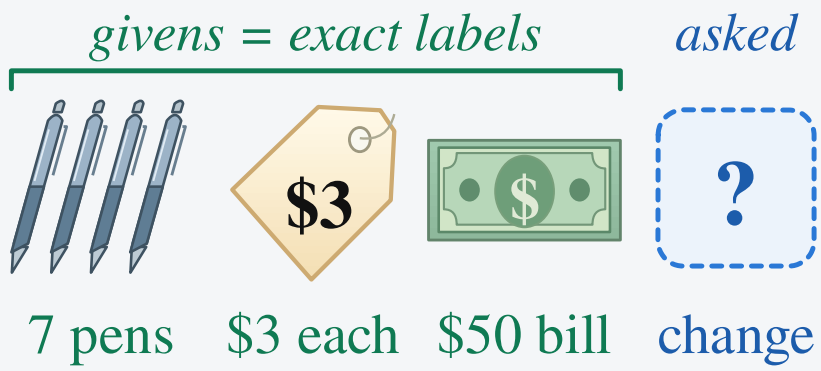
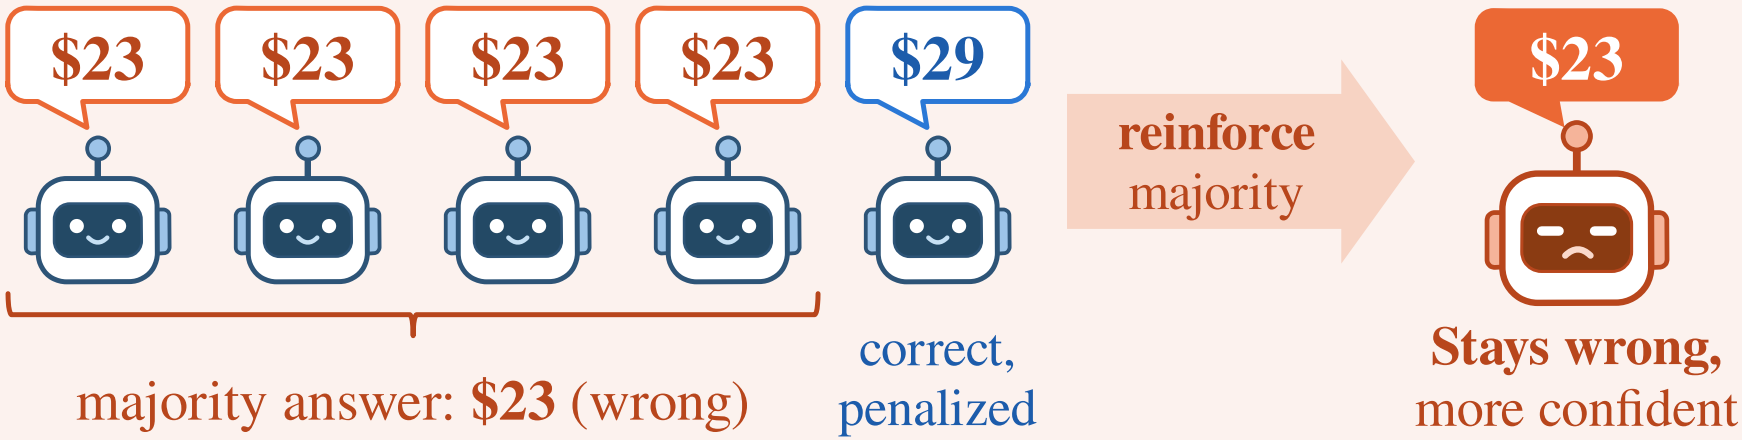
(a) Problems come with verifiable givens

Maya buys 7 pens at $3 each, pays with a $50 bill, and asks for her change. How much change does she get?



Answer-conditioned recovery: *state a candidate, hide a given, solve for it.*

$29 → 7 pens at z, paid $50, change **$29**. Find z. → $z = 3$ ✓

$23 → 7 pens at z, paid $50, change **$23**. Find z. → $z \approx 3.86$ ✗


(b) Self-consensus can be confidently wrong
